ENTERTAIN WITH FLARE

## OUTDOOR LIVING WITH FLARE

---

The end of a perfect day... friends are gathering and the table is set, drinks are lifted from the ice. As the sun begins to sink and the day's activities turn from action to conversation, the fire is lit. Blazing logs of macrocapa scent the air as dusk falls. Drinks are served, and the talk flows around the fire.

The sun settles below the horizon, the fire is allowed to go to embers, the cooking frame is lifted into the firebox along with the cooking plates, and the mussels are put on the hot plate to open of their own accord. The steaks – marinated and seasoned, are placed on a sizzling hot grill, the kind of heat that only comes from a well built wood fire.

As night wears on, the fire is stoked, the cooking plates removed and the assembled company bask in the heat radiating from the entire solid masonry structure. Chairs are pulled up, and the night extends in the warm glow of the firelight.

FLARE outdoor fireplaces cater to today's modern lifestyle needs, transforming your outdoor living space while not losing sight of the primal, universal romance of a traditional wood burning fireplace.

When it comes to creating a full sensory experience, nothing compares with the sound, aroma and ambiance generated by a raging wood burning fireplace.

# FEATURES

---

## MODULAR DESIGN

## FAST INSTALLATION

## ALL SEASON USE

## FINISH OPTIONS

## ATTENTION TO DETAIL

## COUNCIL COMPLIANCE SAFETY

## VARIETY OF COOKING OPTIONS

## FLEXIBILITY OF USE

## MODULAR DESIGN – MULTIPLE CONFIGURATIONS

All FLARE Outdoor fireplaces are modular in format, allowing design flexibility to suit your particular needs. Add a large variety of textures and surface treatments to the equation and there are multiple configurations – seldom are two fireplaces the same.

## VARIETY OF FINISHES & TEXTURES

You may prefer to leave your FLARE outdoor fireplace in its attractive natural concrete finish. Also FLARE offer a few other finishes. A sophisticated plaster which can be painted to the colour of your choice, or a polished concrete finish to the front face of the fireplace and tops of the woodboxes.

Many other finishes can be applied stone, brick, schist the list goes on, speak to your local specialist for options.

## FLEXIBILITY OF USE

Wood-fired BBQ cooking or even the option of gas? FLARE outdoor fireplaces are primarily designed for wood however there are a number of gas fireboxes in the market that can fit in a FLARE fire (see your local gas supplier for installation and advice).

## SPEED OF INSTALLATION

Your new fireplace can be installed in just a few hours – the solid concrete modules being designed for ease of installation. Access is required for a HIAB, or other small lifting device – these are not lightweight temporary units, but built strong to give lasting pleasure!

## SEASONAL FLEXIBILITY

Fire restrictions can mean that outdoor fireplaces are unable to be used for entertaining in the summer. Fitting a Spark Reducer and semi-translucent doors could allow the ability to use and enjoy your FLARE outdoor fireplace right through summer (check with your local authority).

## AESTHETICS

FLARE outdoor fireplaces have refined the design of their range over years of trial and many, many outdoor entertaining sessions! The FLARE range is easy on the eye, and fits elegantly with today's homes. The overall effect is simplicity, with attention to detail.

## COUNCIL COMPLIANCE

Every FLARE outdoor fireplace comes with a Producer Statement (PS1 - Engineer's Certificate) and plans ready for submission to council should they be required.

## MANUFACTURING PROCESS

All FLARE outdoor fireplaces are constructed using a modular masonry system. Modules are cast at our premises in Tauranga, then palletised for shipping nationwide.

## SAFETY

FLARE outdoor fireplaces have their fireboxes set at a height that is safe for children. The front of the firebox has a stainless steel shield to protect against log roll out. This is also double folded to reduce the risk of burns.

## OTHER POINTS OF INTEREST

For optimal ambience the firebox is typically set at a height that is viewable to all your guests, not just the few in front.

## DESIGN BENEFITS

Solid masonry construction provides huge residual heat distribution.

There is no steel firebox to rust and stain your deck, and that means there is no need to put covers over your fireplace when not in use.

The fire is designed as a "lazy fire". There is no grate, as the fire is built directly on top of the firebricks, like in a pizza oven or any modern efficient wood fire. After the initial rush of flame, this provides a solid, warming fire that burns slowly with an intense amount of heat.

The fireboxes on all of the FLARE outdoor masonry fireplaces are designed to take either a cooking frame or swing frame. These frames can be fitted with cooking plates, grills, wok, rotisserie, pizza hood and stone or whatever takes the chef's fancy!

To cook a tasty pizza, add a grill plate with a stone to your cooking frame, then place a pizza hood over the top. In just minutes you'll be enjoying your wood-fired pizza!

## COOKING PHILOSOPHY

---

New Zealanders are becoming very sophisticated outdoor cooks. Our outdoor fireplaces give you the opportunity to enjoy the full experience of a flame grilled steak or the exotic taste of pizza cooked over truly hot coals. The Italians mastered the art of cooking over coals by using a fire that burns vertically on the back of the firebox and dragging coals forward for cooking, whereas the South Africans use a grate on the left, drawing the fallen coals to the centre for cooking.

FLARE outdoor fireplaces are designed along similar lines, but adapted to suit the Kiwi style of multiple use, making the most of our unique outdoor lifestyle.

Our fireplaces allow you to light a big fire for everyone to enjoy as your guests arrive. As the night progresses, move the ember base to one side of the firebox for use as a heat bank, lift the cooking frame into place and select your favourite grill or hot plate, heat it and start to cook. If further heat or flavour is required, manage your charcoals accordingly, dragging them across as required allowing infinite variation of heat and flavour. This level of control makes cooking a breeze. Our unique design allows for a portion of the fire to be kept at full height, providing both aesthetics and a constant source of embers for cooking.

After dinner lift out the cooking frame and add more logs.
